MODEL VALIDATION & PERFORMANCE

Backtesting results comparing actual vs predicted cash flows

INSIGHTS & RECOMMENDATIONS

Key findings and actionable recommendations for finance teams

KEY INSIGHTS

[Cash Flow Patterns]

- Consistent negative net cash flow across most countries
- Operating cash flows dominate (AP payments, Payroll)
- Month-end patterns visible in weekly data

[Forecast Performance]

- Prophet model shows variable accuracy by country
- Best performance: ID, TH (MAPE < 30%)
- Challenging: KR, SS (high volatility)

[Liquidity Observations]

- Short-term liquidity risk: All countries show negative projected cash flows
- 6-month outlook: Stable negative trend expected
- Key drivers: Accounts Payable, Payroll cycles

[Data Quality Notes]

- 44 weeks of historical data (Jan-Nov 2025)
- 8 countries/entities analyzed
- Clean data with no missing values

RECOMMENDATIONS

[Short-Term Actions: 1-4 Weeks]

- Monitor high-volatility countries (KR, SS)
- Review AP payment timing for optimization
- Set up alerts for cash flow deviations > 20%

[Medium-Term Actions: 1-6 Months]

- Implement rolling forecast updates (weekly)
- Consider ensemble model approach
- Add external regressors (FX rates, seasonality)

[Model Improvements]

- Collect more historical data for better training
- Add ARIMA/XGBoost for comparison
- Implement anomaly detection pipeline

[Dashboard Enhancements]

- Add real-time data refresh capability
- Include drill-down by transaction type
- Integrate with Power BI for interactivity
